## PREFACE

25X1D

This photographic interpretation report is prepared in partial response to CIA requirement C-DI5-82,750, which requested scaled, rectified line drawings of selected facilities at Sary-Shagan Antimissile Test Center (SSATC). The data base contained herein was derived from photography obtained on Mission

Subsequent reports, issued periodically, will update this basic report, utilizing photography received during the reporting period. Changes in basic facilities and/or the addition of new facilities during that time will be shown by color coding on the basic line drawing.

All measurements presented in this report were accomplished by the NPIC Technical Intelligence Division (TID) and are considered accurate within the following tolerances:

	Horizontal Measurements	Vertical Measurements	Relative Position on Plot
HEN HOUSE Structures only	±5' or 2% <sup>a</sup>	±5' or 5% <sup>a</sup>	±5' or 5% <sup>a</sup>
Associated Structures and details on individual HEN HOUSE Base Plots	±5' or 3% <sup>a</sup>	±5' or 5% <sup>a</sup>	±5' or 5% <sup>a</sup>
Northern & Central Support Areas			
Transformer Substation			
Overall plot	±5' or 3% <sup>a</sup>	±5' or 3% <sup>a</sup>	±5' or 5% <sup>a</sup>
Southern Support	±5' or 8% <sup>a</sup>	±10' or 5% <sup>a</sup>	±10' or 5% <sup>a</sup>

<sup>a</sup>whichever is greater

The precision target plots included in this report are mathematically rectified projections of the area. Plots are compiled utilizing precision mensuration instruments, and image interpretation is performed with the aid of stereoscopic viewing equipment. Identifiable image points are measured and their coordinate values mathematically transformed by computer. This transformation corrects for camera and attitude (pitch, roll, and yaw) induced distortions but does not correct for displacement due to ground relief and object height. While these target plots represent the most accurate data compiled to date, the user is cautioned to exercise care in scaling distances or determining azimuths from these plots inasmuch as relief can introduce errors in distance and alignment.

## SITE 13, SARY-SHAGAN ANTIMISSILE TEST CENTER, USSR

25X1D

25X1D

25X1D

25X1D

Site 13 (Figure 2) is located approximately 52 nautical miles (nm) northeast of the Main Support Base at the Sary-Shagan Antimissile Test Center at 46-35N 074-31E. The first activity observed at the site was the construction of the building triad (Figure 3) in [redacted] Construction activity on the Dual HEN HOUSE radars at Site 13 was first noted as follows: Dual HEN HOUSE A (Figure 4) [redacted] Dual HEN HOUSE B (Figure 5) [redacted] Dual HEN HOUSE C (Figure 6) [redacted] and Dual HEN HOUSE D (Figure 7)

[redacted] facilities at Site 13 consisted of 1 Dual HEN HOUSE radar which is apparently externally complete, 3 Dual HEN HOUSE radars under construction but still uncompleted, a transformer substation (Figure 8), and associated support areas (Figures 9, 10, 11 and 12). In addition, a functionally unidentified earth scar was located northwest of the HEN HOUSE activity.
